PROFESSIONAL SUMMARY

Experienced Software Engineer with over two years of hands-on experience building production-ready, cross-platform mobile applications using Flutter and Dart. Specialized in Clean Architecture, modern state management, CI/CD pipelines, and scalable mobile application development. Worked as the sole Flutter developer within an 8-person software team, delivering enterprise mobile applications integrated with Firebase, REST APIs, and cloud services. Continuously expanding into Full-Stack engineering with Go (Golang), PostgreSQL, Docker, and RESTful microservices. Passionate about building production-quality software and continuously expanding into backend engineering with Go while contributing to scalable, business-focused applications.

2+ Years Experience

6 Software Projects

1 Google Play Published App

Flutter • Go • Firebase

TECHNICAL SKILLS

Languages:	Dart, Go (Golang), SQL
Mobile Dev:	Flutter, Material Design, Responsive UI, Flutter Flavors, Custom Widgets, App Optimization
Architecture:	Clean Architecture, MVC, Repository Pattern, Modular Architecture, GetX, Provider
Backend & Cloud:	Go (Gin), REST APIs, JWT, Firebase (Auth, Firestore, FCM, Config), Supabase
Databases:	PostgreSQL, Cloud Firestore, Isar DB, SharedPreferences, GetStorage
DevOps & Tools:	Git, GitHub Actions, Codemagic, Docker, VS Code, Visual Studio, Android Studio, Firebase Console, Figma, Postman

PROFESSIONAL EXPERIENCE

Ewros Yazılım Otomasyonu

July 2024 – March 2025 | Bursa, Türkiye

Flutter Software Engineer

- Served as the sole Flutter engineer in an 8-person team, leading mobile architecture and delivery for enterprise solutions.
- Built an enterprise mobile ERP app for furniture manufacturing, unifying procurement, inventory, production, personnel, and finance.
- Designed barcode-driven workflows for warehouse inventory and integrated a client-side PDF generation engine for operational reporting.
- Implemented fine-grained Role-Based Access Control (RBAC) to secure multi-department data workflows and corporate records.
- Standardized client codebases using Clean Architecture and Repository Pattern, improving maintainability and supporting future feature development.
- Reduced frame drops observed on complex dashboards by optimizing widget rebuilds and rendering performance.
- Automated Android build and deployment pipelines using GitHub Actions and Codemagic, reducing manual release effort and improving deployment consistency.

FEATURED PROJECTS

Yemeliyiz Sürüş Online Sipariş - White-Label Food Delivery Ecosystem

Google Play Published

Tech Stack: Flutter, Dart, Firebase, Google Maps API, REST APIs, Flutter Flavors, FCM, GetX, PayTR/iyzico

- Designed a shared codebase using Flutter Flavors to support three independent applications (Customer, Business, Admin) while minimizing duplicated code.
- Integrated real-time order tracking and location services using Cloud Firestore, Google Maps API, and Geolocator to streamline delivery logistics.
- Implemented dynamic feature toggles using Firebase Remote Config to push updates without requiring app store re-submissions.

Enterprise ERP Mobile System - Factory Management

Production App

Tech Stack: Flutter, Dart, Firebase, REST API, Barcode Scanner, Dynamic PDF Engine

- Engineered six core operational modules (Procurement, Inventory, Production Line, Ledger, HR, Logistics) for factory floor digitalization.
- Built dynamic PDF invoice generators on the client side to provide instantaneous offline/online financial reporting.
- Standardized mobile architecture using Clean Code principles to ensure scalability for multi-factory deployment and maintenance.

Secure Password Manager - Full-Stack App

Completed Prototype

Tech Stack: Flutter, Go (Golang), Gin, PostgreSQL, JWT, Docker, GORM

- Built as a learning project to strengthen backend engineering skills with Go while applying production-oriented architectural principles.
- Engineered a RESTful backend using Go/Gin with JWT-based stateless authentication and containerized environment via Docker.
- Implemented secure data encryption flows between the Flutter frontend and Go backend to protect sensitive user credentials.

Ingredia - AI Recipe Assistant

Completed Product

Tech Stack: Flutter, Dart, Google Gemini API, Supabase, Clean Architecture

- Designed and developed a generative AI app using Google Gemini API to build custom recipes based on available household ingredients.
- Engineered structured prompts and response handling to improve the consistency of AI-generated recipe recommendations.
- Integrated Supabase for fast, real-time database management and authentication.

EDUCATION

Yalova University

Expected Graduation: June 2026

Associate Degree in Computer Programming | Yalova, Türkiye

LANGUAGES & PREFERENCES

- Languages:** Turkish (Native), English (Professional proficiency in reading technical documentation and written async communication)
- Work Preference:** Open to Remote & International Relocation | Full-Time
